

Product datasheet

anti-Keratin Pan mouse monoclonal, Lu-5, lyophilized, purified

Short overview

Cat. No.	610145
Quantity	50 µg
Concentration	50 µg/ml after reconstitution with 1 ml dist. water

Product description

Host	Mouse
Antibody Type	Monoclonal
Isotype	IgG1
Clone	Lu-5
Immunogen	Cells of lung cancer cell line A549 and A2182
Formulation	Lyophilized; reconstitute in 1 ml dist. water (final solution contains 0.09% sodium azide, 0.5% BSA in PBS buffer, pH 7.4)
Conjugate	Unconjugated
Purification	Affinity chromatography
Storage before reconstitution	2-8°C
Storage after reconstitution	Up to 3 months at 2-8°C; long term storage in aliquots at -20°C; avoid freeze/thaw cycles
Intended use	Research use only
Application	ICC/IF, IHC
Reactivity	Bovine, Chicken, Human, Mouse, Pleurodeles, Rat, Snake, Xenopus

Applications

Immunohistochemistry (IHC) - frozen	Assay dependent
Immunohistochemistry (IHC) - paraffin	1:10-1:20 (protease treatment and/or microwave treatment recommended)
Western Blot (WB)	Not applicable

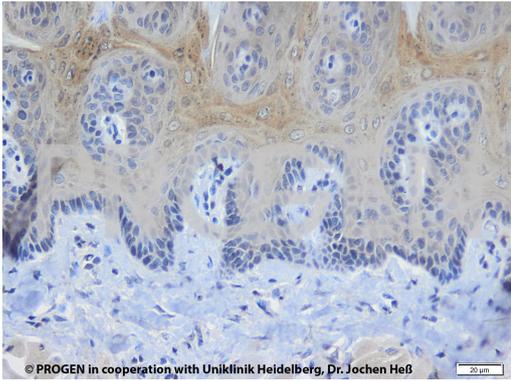

Background

Lu-5 represents an excellent marker for all types of epithelia. Ideal marker for immunolocalization studies on frozen and paraffin embedded tissue. Useful for distinguishing carcinomas from non-epithelial tumors. Tumors specifically detected: all epithelium-derived neoplasms.

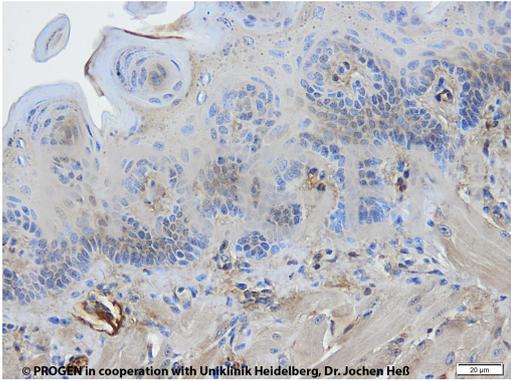

Polypeptide reacting: Most keratins present in human epithelia (including keratins - formerly also designated cytokeratins -K1, K5, K6, K14, K18, K19) and most acidic (K31 - KK38) and basic (K81 - K86) hair keratins from human hair follicle. The antibody specifically detects a conformational epitope common to most keratins, but not to other intermediate filament polypeptides.

Reactivity on cultured cell lines: MCF-7, PLC, A-431, HeLa; PtK2, A6 (XLKE).
