Background

Mab 502 recognizes the 60 kD outer membrane complex protein present in the periphery of reticulate bodies (RBs) and identifies all serotypes (serovars A-C, D-K and L1-L3) of *C. trachomatis* as well as *Chlamydophila psittaci* and *Chlamydophila pneumoniae*. The epitope is also present on elementary bodies (EBs) of *C. trachomatis* C-complex serotypes.
