#### Background

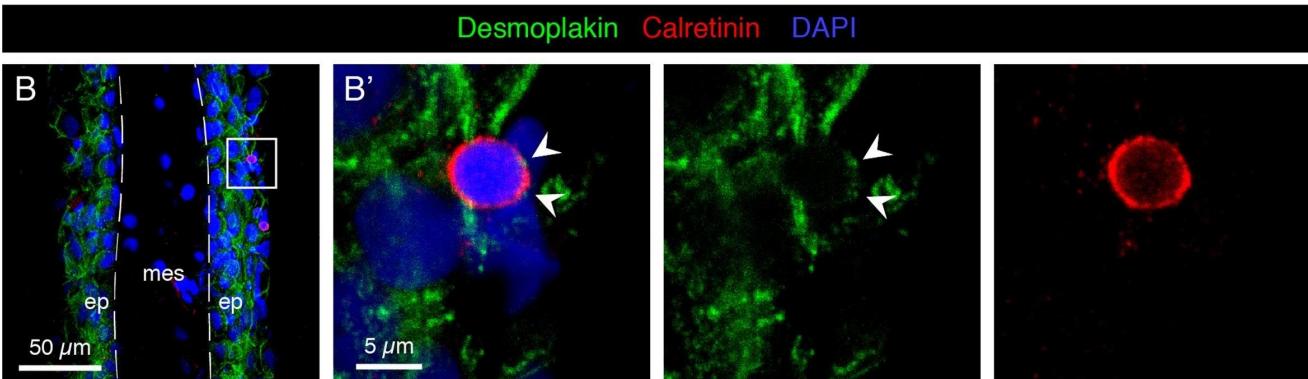

The antibody shows distinct punctate membrane staining of different epithelia. Area compositae of the myocardium of higher vertebrates are also positive. The epitope is located in a region highly conserved among species (human, zebrafish). Polypeptides reacting: Desmoplakin 1 and 2.

Reactivity on cultured cell lines: Several human carcinoma cell lines: MCF-7, A-431, HaCaT, CaCo2; bovine cells: MDBK, BMGE; RTG-2 (rainbow trout).
