

Product datasheet

Glial Fibrillary Acidic Protein (GFAP), bovine, 250 µg

Short overview

Cat. No. 62007 **Quantity** 250 µg

Product description

Source Bovine spinal cord

Molecular Weight 52 kDa Isoelectric point pl 5.4

Purity > 95% (determined by SDS gelelectrophoresis)

Reconstitution Reconstitute with 200 µl distilled water (final volume 250 µl). Final solution: 10 mM sodium

phosphate buffer pH 7.5, 6 M urea, 2 mM DTT, 1 mM EDTA, 10 mM methylammonium chloride;

Protein concentration: 1 mg/ml

Application Protein standard in 1D and 2D SDS gelelectrophoresis, immunoassays and immunization

Synomym GFAP, GFP

Storage Lyophilized at 2-8°C; reconstituted at -20°C (avoid freeze/thaw cycles)

Intended use Research use only

Background

Glial Fibrillary Acidic Protein (GFAP) standard for immunoblotting, immunization and immunoassays. Reconstitution to filaments is performed by dissolving in 6 M urea buffer (see above) at concentrations of approx. 0.5 mg/ml. Protofilaments and filament complexes are obtained by dialyzing the resulting polypeptide solution stepwise to a concentration of 4 M urea and then to low salt condition (50 mM NaCl, 2 mM dithiothreitol, 10 mM Tris-HCl, pH 7.4). For immunization purposes, the solution can be further dialyzed against PBS (phosphate buffered saline, e.g. Dulbecco's PBS). - Hatzfeld M and Franke WW (1985). J Cell Biol 101, 1826-1841- Hatzfeld M et al. (1987). J Mol Biol 197, 237-255
