

Product datasheet

anti-Progesterone mouse monoclonal, EBS-O-048, purified

Short overview

Cat. No.	691500
Quantity	1 ml (100 µg/ml)
Concentration	100 µg/ml

Product description

Host	Mouse
Antibody Type	Monoclonal
Isotype	IgG1 kappa
Clone	EBS-O-048
Immunogen	Progesterone-11a-hemisuccinate conjugated to BSA (Progesterone-11a-HMS-BSA)
Formulation	PBS with 0.02% sodium azide
Conjugate	Unconjugated
Purification	Affinity chromatography
Storage	2-8°C
Intended use	Research use only
Application	ELISA
Reactivity	All species

Applications

ELISA	Assay dependent
--------------	-----------------

Background

EBS-O-048 is specific for progesterone. It exhibits minimal cross reactivity with related compounds in ELISA. Progesterone is a steroid hormone synthesized from the cholesterol derivative, pregnenolone, in the cortex of the adrenal gland. Progesterone is secreted by the corpus luteum and acts to prepare the endometrium for the implantation of a fertilized egg. During pregnancy, it is secreted by the placenta to prevent spontaneous abortion and to stimulate the development of mammary tissue to produce milk. Thus, progesterone plays a central role in the reproductive events associated with the establishment and maintenance of pregnancy. Luteinized theca cells of normal ovary secrete progesterone.

Positive control: ovary or placenta.
